

Ingersoll Rand, now Doosan Portable Power, a U.S. manufacturer delivering products since 1902

At the turn of the century, stationary air compressors were physically large and heavy requiring bulky-solid foundations. The Rand Drill Company in Painted Post NY, built the first portable in 1902 by mounting a water-cooled stationary compressor on wheels.

In 1906, the Ingersoll-Sergeant Drill Company located in Easton PA, merged with Rand Drill Company to form the Ingersoll Rand Company.

Since 1912, Ingersoll Rand has been the world leader in mobile compressors. They have supplied their products to the US military since 1917.

Ingersoll Rand developed and designed the worlds first: water-cooled, air-cooled, rota-

ry and oil-cooled mobile compressors.

In 1997, continuing in the company philosophy of supplying their customers with first class products, Ingersoll Rand now Doosan Portable power introduced light towers and mobile generators.

Since 1971, Central Diesel has been building custom generator sets for the Agriculture and Construction markets.

We are honored and proud to offer the Ingersoll Rand-branded mobile generators, light towers and remote security cameras from Doosan Portable Power to our customers.

The generators range from 25 to 570 kVA. The units come standard with a selector switch for either single phase or three

phase output. The packages come in either a mobile platform or skid mounted platform.

The units are CSA certified and use current Tier engines to comply with EPA regulations. The units are built in Statesville, North Carolina and come with a 1-2 year warranty.

CDI is having a special June Sales Program on the following generators:

- G25 KW Generator Package: \$15,250.00
- G40 KW Generator Package: \$19,120.00
- G90 KW Generator Package: \$29,800.00

We have limited supplies of these units, so when they are gone the program will end.

“We are an equal opportunity Employer”
